"MERCURY Operon regulation by the merr gene of the organomercurial resistance system of plasmid pDU1358.";

J. Bacteriol. 171:4241-4247 (1989).

-!- FUNCTION: MEDIATES THE MERCURIC-DEPENDENT INDUCTION OF MERCURY RESISTANCE OPERON. IN THE ABSENCE OF MERCURY MERR REPRESSES TRANSCRIPTION BY BINDING TIGHTLY TO THE MER OPERATOR REGION;
WHEN MERCURY IS PRESENT THE DIMERIC COMPLEX BINDS A SINGLE ION AND BECOMES A POTENT TRANSCRIPTIONAL ACTIVATOR, WHILE REMAINING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   01-JAN-1990 (Rel. 13, Created)

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
